#### 4 Secure Anti Theft Clutch Lock

Anti theft clutch lock works on basic principle of locking the movement of clutch because of which it is very impossible to move forward your car, however car is in start position thereby increases your **CAR SECURITY**.

It is mechanical device made up of steel owing to which it is very difficult to cut or break by force while on the other hand, it takes around 10 to 20 seconds to lock or unlock using key. In addition to this, it can be installed in such a manner without disturbing the originality of car. It is less in weight, very easy in operation & works very effectively to protect your automobile assets.

#### 4 Secure Anti Theft Clutch Lock - How to Install :

- Product kit involves original product, 2 extension plates, 1 allen key, 4 CSK Screws, pair of key and M-seal.
- Select your vehicle between the category VG 120 to VG 170 in the brochure.
- If vehicle is in the category of VG 120 use product as it is.
- Adjust the extension plate with the appropriate threading holes.
- Tighten the extension plate with original product by using allen key and CSK screws.
- Do the same process on the other side also.
- Insert Anti Theft Clutch Lock in the clutch as shown in picture on the front page.
- Lock the device with clutch by using dotted key.
- Check whether the clutch operates by pressing it.
- If yes, adjust the extension plate with the next threading holes.
- If clutch is not operated then it seems ok.
- Fill up the M-Seal in holes of the CSK Screws on both side.
- Now device is ready for use. Tie a product key with the car key.
